

# Don't Wear Protective Gloves Outside the Research Laboratory.

**Gloves may become contaminated during research procedures.**

**Wearing gloves into public areas may lead to cross-contamination.**

**Gloves should be removed prior to entering any unrestricted areas, such as corridors, elevators, restrooms, public dining areas, and offices. Please be considerate and protect others' safety and peace of mind.**

## Transporting Chemicals or Specimens

**Gloves should not be necessary to transport chemicals or specimens from location to location. Instead, use a cart, a clean secondary container, or a bottle carrier with secure handles.**

***Please remember: Hand washing is always necessary – Even after wearing protective gloves***
